

A double overlay showing in colour a **resistivity** survey of a local tumulus site. Overlaying, in greyscale, is a **magnetometry** survey revealing a portion of a rectangular enclosure as yet to be identified. The modern field boundary shows as a thick dark line.

We are a group of experienced amateur landscape archaeology surveyors funded by the Heritage Lottery Fund. Based in South Cambridgeshire we have made successful geophysical surveys of several sites as illustrated in this leaflet. We are available to make a similar survey in your parish to enhance understanding etc.....Such surveys are non-intrusive yet can reveal features which are not visible.

#### We can.....

- do resistivity surveys to indicate underlying features such as walls or ditches
- do magnetometry surveys to indicate underlying features such as hearths or pits.
- process results and produce a plot of your site with our results fitted onto a map of your area
- produce a leaflet to disseminate the findings to interested villagers.
